Senior Python & AI Backend Developer

📍 Location: Remote / Hybrid 💼 Experience: 3+ Years 🏢 Department: Engineering

Role Overview

Acme Corp is seeking an experienced Backend & AI Engineer to design and build scalable microservices, automated pipelines, and retrieval-augmented LLM integrations. You will lead backend architecture and build robust production services.

Required Core Qualifications & Technical Skills

- **Language Proficiency:** 3+ years of expert hands-on Python development experience.
- **Frameworks:** Strong development experience with **FastAPI** and **Django**.
- **Databases & Caching:** Deep experience with **PostgreSQL** relational queries and **Redis** caching layers.
- **Containerization & DevOps:** Proficient with **Docker** containers and **Git / GitHub Actions CI/CD** pipelines.
- **AI & LLM Orchestration:** Practical knowledge of **LangChain**, **Chroma Vector Databases**, and local/cloud LLMs.
- **Cloud Infrastructure:** Deployment experience on **AWS (ECS, S3, EC2)**.

Key Tech Stack:

Python | FastAPI | Docker | PostgreSQL | Redis | LangChain | ChromaDB | AWS ECS | Kubernetes (Required) | GraphQL (Required)

Key Responsibilities

- Architect, build, and maintain production-ready RESTful APIs using FastAPI and Python.
- Develop LLM workflow chains, document loaders, and semantic search retrieval pipelines using LangChain and ChromaDB.
- Design database schemas and optimize query performance in PostgreSQL and Redis.
- Containerize applications using Docker and configure automated deployment pipelines on AWS.
- Collaborate with cross-functional teams to integrate AI agent workflows into production.

Preferred / Bonus Qualifications

- Experience with **Kubernetes** cluster orchestration and helm charts.
- Proficiency in designing **GraphQL APIs** alongside standard REST protocols.
- Prior background in microservices monitoring using Prometheus and Grafana.
